pto driven side tilt mixer

▶▶ IAN DICKIE BP 400 AG PTO SIDE TILT MIXER

The Ian Dickie BP 400 AG is a premium, heavy duty side-tilt concrete mixer that is powered by a tractor PTO (Power Take Off) shaft. This robust mixer features a shaft to couple with the tractors PTO, and also has a three-point bracket system to attach to the tractor securely.

These concrete mixers are popular in the agricultural sector, as most farmers have a tractor available for general farm work. The advantage is that the concrete mixer can be attached and in operation quickly and the maintenance that would be required for an engine driven concrete mixer is eliminated.

Features:

- Lubrication point
- Cast iron gear ring
- Drum with reinforced opening
- 3 double mixing blades
- 2 conical bearings
- 3 transmission bearings
- Reinforced pedal
- Coupling system

BP 400 AG PTO
